

.env

```
CLASS_NAME=Date
```

Code

```
import Reflexion from "../Reflexion";

describe("test pour la création de classe avec la reflexion", () => {
  it("créer classe", () => {
    expect(Reflexion()).toBeInstanceOf(Date);
  });
});
```

Test

```
import * as dotenv from 'dotenv';

export default function Reflexion() {
  dotenv.config();
  const className:string = process.env.CLASS_NAME!.toString();
  return Reflect.construct((global as any)[className], []);
}
```
